

Data Wrangling 🤠

Welcome

Lesson 0

Howdy! I'm Vrinda.

- North Carolina native
- **NCSSM + UNC + Michigan** Alumni
- Teaching CS courses since undergrad with **10** semester taught
- Full-time developer at **SAS**

Data and Computing

- **Computer Science:** Developing and optimizing algorithms and software
- **Data Science:** Using statistics to and machine learning to explore data and make predictions
- Both rely heavily on programming as a skill

Course Breakdown

- **Async Week 1:** Setup + Basics
- **Async Week 2:** Python Cont'd
- **Sync Week 3:** Data-Focused Applications + Machine Learning Project

Asynchronous Expectations

- Ten lessons anywhere from 10-30 minutes long
- Gradescope questions with every lecture
- Course setup and three projects
- Weekly assignments due each **Sunday** at **midnight**

What is a program?

- A **program** is a file that tells a computer how to do a task
- We write programs using **code** — instructions a computer can understand
- We can write programs to load, transform, and store data

Python

- Python is a programming language
- A **programming language** is human-readable way to tell a computer what to do with your data
- Python is widely used in data science and research

Programming is a skill—take time to practice it on your own.
